

November 3, 2015

Dear Council Members,

Me and my classmates are upset about a very serious matter. We want to stop plastic bag pollution. We want to use reusable bags to help the environment.

It could save lots of animals lives and help out greensboro. Think about how plastic bags can get into rivers, streams, and even the ocean. And what do sea turtles eat? Jelly fish! And what does a plastic bag floating in the water look like?.....

A JELLY FISH! And other sea animals can get it stuck on a fin or try to eat it and get it stuck in their throat and die. We are trying our best to stop plastic bag pollution and I hope you will help us out by agreeing with us.

Sincerely,

Sabrina Gladstone.
